Subject: Education opportunity - TechForSchool

Dear Mr. Bodei,

I hope this email reaches you in good health. I'm writing to you on behalf of TechForSchool, a global organization that uses practical project days at technical schools across Europe to motivate the future generation of engineers.
We think that working with other engineering specialists gives students a chance to close the gap between theory and practical applications. Students learn about the latest business practices, sharpen their problem-solving abilities, and become inspired to pursue engineering professions by collaborating with professionals. In addition to improving their technical skills, these experiences help them become more creative and collaborative.

The "Smart City Challenge" is one of our most well-known initiatives, in which students create a sustainable city model. They provide solutions for waste management, energy efficiency, and intelligent transportation using inexpensive materials and coding techniques. In addition to introducing students to the idea of sustainable urban development (a crucial subject in contemporary engineering) this project fosters critical thinking.
Your school must have a classroom or workshop with tables, chairs, and power outlets to host the Smart City Challenge. We will bring all required supplies and equipment. We advise a group size of 20–30 students for maximum involvement, and the day normally lasts from 9:00 AM to 3:00 PM.

Bringing this thrilling event to your school would be our pleasure. If you are interested, please allow us to know so that we can go over further specifics.
I'm eager to hear from you!

Best regards,

Matthias Hrbek – TechForSchool
